
Kirill Ilyin

Fullstack Developer / AI Developer / Mobile Developer

Saint Petersburg, Russia · +7 951 981-30-33

smookki@yandex.ru · Telegram: @smokkkkiiii · GitHub: coder-smookki

I build Python backends and mobile applications with Kotlin, Swift and Flutter. Co-founder of F-Rent, an item rental marketplace, with app releases on the App Store and RuStore. In 2026, I led the team that won first place in the IT track of PRO STROY 4.0. Founder of the Lumnex IT agency.

Experience

Founder / Lumnex IT Agency

June 2026 - Present

- Deliver IT projects for businesses, public-sector organisations and individual clients, from analysing client processes to launching the product.
- Build a service that matches an uploaded CV with leads and job opportunities on popular platforms.

Co-founder and CEO / F-Rent

2026 - Present · f-rent.ru

- Develop a peer-to-peer item rental platform: owners set rental terms and deposits; bookings range from a few hours to several months.
- Implement business logic and integrations in Python with MySQL. The website backend uses JavaScript; mobile apps use Kotlin and Swift, with some Java code.
- Integrated T-Bank online payment processing and a cash-register system for fiscal receipts. Released the app on the App Store and RuStore in May 2026.
- Set up the team's GitHub workflow: branches, code reviews, GitHub Actions CI/CD and automated tests.

Stack: Python, MySQL, Kotlin, Swift, Java, JavaScript, Docker, GitHub Actions.

IT Specialist / TANA HOMITZ

April 2026 - Present · T. A. Tsimokh, sole proprietor · tanahomitz.com

- Develop a premium clothing brand's Tilda online store: catalogue, cart, payments, collection pages and journal. Launched a Telegram Mini App on Unitee.
- Configured SEO in Yandex Webmaster: search impressions rose from single digits to 200+, with 65 clicks, during July-August 2026.

Developer / Moscow Exchange Trading Bot

February 2026 - Present

- Built a Telegram bot for stock monitoring and buy, additional-buy and sell signals. Settings include RSI, take-profit, trailing stop and three additional-buy stages.
- Implemented five daily market checks across 37 tickers, PnL, cost and loss calculations, a virtual portfolio and per-ticker profit charts.

Stack: Python, aiogram, MOEX ISS API.

Developer / PRONALOG

February - August 2026 · PRONALOG LLC · pronaloginfo.ru

- Built a Telegram and MAX bot for legal questions from Russian and international clients, together with an admin panel and payment acceptance.
- Created an accounting-services landing page for Wildberries and Ozon sellers in August 2026.

Developer / Taxi Booking Service in MAX

March - August 2026 · Miass and Tarusa

- Built three connected bots for an operating taxi service: passenger, dispatcher and driver bots.
- Implemented order hand-off from passenger to dispatcher, driver assignment and trip display in the driver's bot.

Stack: Python, MAX Bot API, maxo.

Developer / Gazstroyprom

April - May 2026 · [gsprom.ru](#)

- Developed an employee file-sharing service with uploads, access permissions, external links, DLP checks and antivirus scanning for every file.

Stack: Python, TypeScript.

Mentor / Khantathon, Junior Track

2024 - Present · Surgut, Khanty-Mansi Autonomous Okrug

- Mentored 8 teams: problem definition, architecture, code reviews and preparation for project presentations.

Hackathons and Case Competitions

PRO STROY 4.0 / Team Lead / First Place in the IT Track

August 2026 · Team Alst · Gazstroyprom · Saint Petersburg

- Built a corporate-regulation search system running on our own servers without external APIs.
- Integrated a multi-agent graph with the interface, including streaming answers and displaying sources before the first token.
- Configured tracing with OpenTelemetry and OpenLIT; identified a query-parsing issue in structured output.
- Implemented relevance filters and numerical checks against sources: 10 correct refusals out of 10.
- Ran an A/B test on 121 questions: replacing `gpt-oss:20b` with `gemma4:26b` reduced median response time from 23.2 seconds to 9-12 seconds.

Case results: hit@5 - 0.926; MRR - 0.851; "not found" - 7.4%; 654 automated tests.

Stack: Python, LangGraph, Chainlit, Qdrant (dense + BM25 + RRF), Ollama, PostgreSQL, OpenLIT, Prefect, Docker.

SSD Video Conferencing Platform / Developer / Second Place

December 2024 · Khantathon-2025 · Surgut · [GitHub](#)

Built a video conferencing platform using the Khanty-Mansi regional API for a regional government department. Integrated it into Telegram through a WebApp so users could join meetings without a separate application.

untitled.py AI Assistant / Developer / First Place

December 2023 · Khantathon-2024 · Surgut · Client: Recifra agency

The assistant analyses sentiment in Telegram conversations, extracts tasks and displays them in a web dashboard for managers. The agency adopted the solution in its operations.

Games for Yandex Alice / Developer

2022 - 2024 · Lord of the Empire on [GitHub](#)

"Mafia War" won first place and the Grand Prix at the Yandex Textbook and Alice hackathon on 7 May 2022 (team SSD). "Lord of the Empire" won first place at a Yandex hackathon in 2024.

SSD QR Code and Link Checker / Developer / Third Place

February 2023 · devHACK · Rostov-on-Don · [Website](#) · Bot

Implemented URL and QR code checks using VirusTotal and custom XSS checks. Awarded a third-degree diploma.

Additional Achievements

- Winner's diploma at AI Challenge, an international artificial intelligence hackathon.
- Prize winner in the Cybersecurity track of the Scientific Universe competition (2023).

Projects

Funora / Multi-language SDK and Framework for FunPay

2026 - Present · Open source · Apache-2.0 · [GitHub](#)

Designing the specification and Python reference implementation. Shared contracts for models, events and errors; common test vectors across SDKs. A consistent model: `Client`, services, events, router and filters. Planned implementations include TS/JS, Java, .NET, C++ and C. The project is in the design stage; no package has been released yet.

Ocean Wallet / Cryptocurrency Wallet with Payment Features

2026 - Present

Developing a cross-platform Flutter app. Screens and automatic wallet creation are implemented; business logic is in progress. Preparing an MVP and an investment application in the UAE.

Petersburg Energy-Saving Company

2026 · [GitHub](#)

Completed a developer test assignment and received a job offer.

PyGame-DOOM-1993 / 2.5D Shooter

2022 - 2025 · [GitHub](#)

Python and Pygame personal project with ray casting, textures, sprites, collisions, weapons and sound. Other personal projects include an [Alice skill built at an ITMO hackathon](#).

Skills

Python - primary language: FastAPI, Django / DRF, Flask / Starlette, aiogram, python-telegram-bot, vkbot / vk_api, MAX Bot API, MOEX ISS API, maxo, discord.py, SQLAlchemy, Alembic, Pydantic, asyncio, aiohttp, Celery, Redis-py, requests, httpx, BeautifulSoup, Scrapy, NumPy, Pandas, Matplotlib, scikit-learn, OpenCV, Pillow, pytest, Poetry, Ruff, PyQt6, Pygame.

LLMs and agents: LangGraph, RAG, Adaptive / Corrective RAG, multi-agent graphs, Qdrant, dense + BM25 + RRF, reranking, Ollama, Chainlit, OpenLIT / OpenTelemetry, Prefect.

AI-assisted development: Claude Code, Codex, task decomposition for agents, multi-agent runs, prompts and context, generated-code reviews, automated testing and A/B tests.

Java: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, JAX-RS, Maven / Gradle, JUnit.

Mobile: Kotlin, Jetpack Compose, Ktor, Swift, SwiftUI / UIKit, Flutter / Dart, Bloc / Provider / Dio.

Other languages: JavaScript / TypeScript, Go, C++, C - syntax, algorithms and procedural programming. Familiar with Express, React, Gin, Fiber, Qt, STL, POSIX, SDL2.

Data and DevOps: PostgreSQL, MySQL, SQLite, MongoDB, Redis; SQL, indexes, migrations; Docker, Docker Compose, Git / GitHub, CI/CD, Linux, Nginx, Postman / Swagger.

Tools and languages: Figma, Photoshop, MS Office. Russian - native; English - A1.

Education

D. F. Ustinov Baltic State Technical University "Voenmekh"

2024 - 2028 · Saint Petersburg

Bachelor's degree in Software Engineering (09.03.04), third year, in progress.

Yandex Lyceum

2021 - 2023

Industrial Programming Fundamentals (2022-2023), with honours; Python Programming (2021-2022).

Yandex Dialogs and ITMO

March 2023

Theory and practical training in developing voice-assistant applications as part of the Alice and ITMO online hackathon (4-26 March 2023).
